2.1 Running the code

All source code is self contained within a singular file called "e2.py".

Running the application can be achieved using *python3 e2.py*.

This runs all the tasks and their respective outputs, Listing 3.1 shows the output of running the application normally.

There are also python tests defined within the application. These can be run using *pytest -v e2.py*.

The flag "-v" is not mandatory, but improves clarity on what actually happened.

Running the tests with the aforementioned command results in an output similar to Listing ??.

2.2 Test Cases

2.2.1 Task 1 Tests

2.2.2 Task 2 Tests

3 Appendix

3.1 Python-output

3.2 Pytest-output
